### 1. SAFETY REGULATIONS AND NOTES

Please read these operating instructions carefully before starting to work with the device. Observe the following warnings to prevent malfunctions or physical damage to both property and people.

These operating instructions are to be regarded as part of this device. If the device is sold or transferred, the operating instructions must accompany it.

These operating instructions may be duplicated and forwarded for information about potential dangers and their prevention.

### 1.1 Levels of hazard warnings

These operating instructions use the following hazard levels to indicate potentially hazardous situations and important safety regulations:

### DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. Compliance with the measures is mandatory.

### WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Exercise extreme caution while working.

### **CAUTION**

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or damage of property.

### NOTE

A potentially harmful situation can occur and, if not avoided, can lead to property damage.

### 1.2 Staff qualification

The device may only be transported, unpacked, installed, operated, maintained and otherwise used by qualified, trained and authorised technical staff.

Only authorised specialists are permitted to install the device, to carry out a test run and to perform work on the electrical installation.

### 1.3 Basic safety rules

Any safety hazards stemming from the device must be re-evaluated once it is installed in the end device.

Observe the following when working on the unit:

⇒ Do not make any modifications, additions or conversions to the device without the approval of ebm-papst.

### 1.4 Electrical voltage

- Check the electrical equipment of the device at regular intervals, refer to chapter 6.2 Safety test.
- ⇒ Replace loose connections and defective cables immediately.

### **DANGER**

### Electrical load on the device

Risk of electric shock

Stand on a rubber mat if you are working on an electrically charged device.

### WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

→ Wait five minutes after disconnecting the voltage at all poles before opening the device.

### **CAUTION**

# In the event of failure, there is electric voltage at the rotor and impeller

The rotor and impeller are base insulated.

→ Do not touch the rotor and impeller once they are installed.

### CALITION

If control voltage is applied or a speed setpoint is stored, the motor automatically restarts, e.g. after a power failure. Danger of injury

- → Keep out of the danger zone of the device.
- → When working on the device, switch off the mains supply voltage and secure the latter from being switched on again.
- $\rightarrow$  Wait until the device stops.
- → After working on the device, remove any used tools or other objects from the device.

### 1.5 Safety and protective functions

### DANGER

Missing safety device and non-functioning safety device If there is no safety device, you could be seriously injured, for example if you reach into the running device or your hands are

sucked into it.

- Operate the device only with a fixed and isolating safety protection and a fixed guard grille. The guard must withstand the kinetic energy of a fan blade detaching at maximum speed.
- → The device is a built-in component. You, the owner/ operator, are responsible for providing adequate protection for the device.
- → Shut down the device immediately if you detect a missing or ineffective protective feature.

### 1.6 Electromagnetic radiation

Interference from electromagnetic radiation is possible, e.g. in conjunction with open and closed-loop control devices.

If unacceptable emission intensities occur when the fan is installed, appropriate shielding measures have to be taken by the user.

### NOTE

Electrical or electromagnetic interferences after integrating the device in installations on the customer's side.

→ Verify that the entire setup is EMC compliant.

### 1.7 Mechanical movement

### DANGER

### Rotating device

Body parts that come into contact with the rotor and impeller can be injured.

- → Secure the device against accidental contact.
- → Before working on the system/machine, wait until all parts have come to a standstill.

### **DANGER**

### Flying parts

Missing safety devices may cause balancing weights or broken fan blades to be ejected at high speeds, causing bodily harm.

→ Take appropriate safety measures.

### WARNING

### Rotating device

Long hair, loose items of clothing and jewellery could become entangled and pulled into the device. You could be injured.

- → Do not wear any loose clothing or jewellery while working on rotating parts.
- → Protect long hair by wearing a cap.

### 1.8 Emission

### WARNING

Depending on the installation and operating conditions, a sound pressure level greater than 70 dB(A) may arise. Danger of noise-induced hearing loss

- → Take appropriate technical safety measures.
- → Protect operating personnel with appropriate safety equipment, e.g. hearing protection.
- → Also observe the requirements of local agencies.

### 1.9 Hot surface

### **CAUTION**

### High temperature at the electronics enclosure

Danger of burn injuries

→ Ensure that sufficient protection against accidental contact is provided.

### 1.10 Storage

- ⇒ Store the device, partially or fully assembled, in a dry and weatherproof manner in the original packing in a clean environment.
- ⇒ Protect the device from environmental impacts and dirt until the final installation.
- ⇒ We recommend storing the device for a maximum up to one year to guarantee proper operation and longest possible service life.
- ⇒ Even devices explicitly suited for outdoor use are to be stored as described prior to being commissioned.
- Maintain the storage temperature, see chapter 3.6 Transport and storage conditions.
- Please make sure that all screwed cable glands are fitted with dummy plugs.

### 1.11 Disposal

When disposing of the device, please comply with all relevant requirements and regulations applicable in your country.

### 2. PROPER USE

The device is exclusively designed as a built-in device for conveying air according to its technical data.

Any other usage above and beyond this does not conform with the intended purpose and constitutes misuse of the device.

Customer equipment must be capable of withstanding the mechanical and thermal stresses that can arise from this product. This applies for the entire service life of the equipment in which this product is installed.

### Proper use also includes:

- Use the device in power systems with earthed neutral (TN/TT power systems) only.
- · Only using the device in stationary systems.
- Carrying out all maintenance.
- Moving air with a density of 1.2 kg/m³.
- Using the device in accordance with the permitted ambient temperature, see chapter 3.6 Transport and storage conditions and chapter 3.2 Nominal data.
- Operating the device with all protective features in place.
- Minding the operating instructions.

### Improper use

Using the device in the following ways is particularly prohibited and may cause hazards:

- Operating the device with an imbalance, e.g. caused by dirt deposits or icing.
- Operation in medical equipment with a life-sustaining or lifesaving function
- Operation with external vibrations.
- Moving solids content in flow medium.
- · Painting the device
- · Connections (e.g. screws) coming loose during operation.
- Opening the terminal box during operation.
- Moving air that contains abrasive particles.
- Moving highly corrosive air, e.g. salt spray mist. Exceptions are devices that are intended for salt spray mist and protected accordingly.
- Moving air that contains dust pollution, e.g. suctioning off saw dust.
- · Operating the device close to flammable materials or components.
- · Operating the device in an explosive atmosphere.
- Using the device as a safety component or for taking on safetyrelated functions.
- Operation with completely or partially disassembled or modified protective features.
- In addition, all application options that are not listed under proper use.

# Translation of the original operating instructions

### 3. TECHNICAL DATA

### 3.1 Product drawing

All measures have the unit mm

1	Mounting position: shaft horizontal (install the support struts only vertically as shown in the view!) or rotor on bottom; rotor on top on
	request
2	Cable diameter: min. 4 mm, max. 10 mm, tightening torque: 4±0.6 Nm
3	Inlet nozzle with bleeder connection for pressure relief (k-factor: 148)
4	Tightening torque 3.5±0.5 Nm

### 3.2 Nominal data

Motor	M3G112-IA
Phase	3~
Nominal voltage / VAC	400
Nominal voltage	380 480
range / VAC	
Frequency / Hz	50/60
Type of data definition	ml
Speed / min-1	2800
Power input / W	2250
Current draw / A	3.5
Min. ambient temperature	-25
/ °C	
Max. ambient	55
temperature	
// °C	

ml = Max. load  $\cdot$  me = Max. efficiency  $\cdot$  fa = Running at free air

 $cs = Customer specs \cdot cu = Customer unit$ 

Subject to alterations

### 3.3 Data according to ErP directive

Installation category	A
Efficiency category	Static
Variable speed drive	Yes
Specific ratio*	1.01

<sup>\*</sup> Specific ratio = 1 + pfs / 100 000 Pa

	Actual	Request	Request
		2013	2015
Overall efficiency η <sub>es</sub> / %	63.9	51.2	55.2
Efficiency grade N	70.7	58	62
Power input Ped / kW	2.24		
Air flow qv / m³/h	4680		
Pressure increase total psf / Pa	1038		
Speed n / min-1	2825		

Data definition with optimum efficiency.

The ErP data is determined using a motor-impeller combination in a standardised measurement configuration.

### 3.4 Technical features

Mass	25.4 kg
Size	355 mm
Surface of rotor	Coated in black
Material of electronics	Die-cast aluminium
housing	
Material of impeller	Aluminium sheet
Material of mounting	Sheet steel, galvanised
plate	
Material of support	Steel, coated in black
bracket	
Material of inlet nozzle	Sheet steel, galvanised
Number of blades	7
Direction of rotation	Clockwise, seen on rotor
Type of protection	IP 54
Insulation class	"B"
Humidity class	F4-1

Mounting position	Shaft horizontal or rotor on bottom; rotor		
	on top on request		
Condensate discharge	Rotor-side		
holes	1100.010		
Operation mode	S1		
Motor bearing	Ball bearing		
Technical features	- Output 10 VDC, max. 10 mA		
Teelinical leatures	- Output 20 VDC, max. 50 mA		
	- Output for slave 0-10 V		
	- Operation and alarm display		
	- Input for sensor 0-10 V or 4-20 mA		
	- External 24 V input (programming)		
	- External release input		
	·		
	- Alarm relay		
	- Integrated PID controller		
	- Motor current limit		
	- PFC, passive		
	- RS485 MODBUS RTU		
	- Soft start		
	- Control input 0-10 VDC / PWM		
	- Control interface with SELV potential		
	safely disconnected from the mains		
	- Over-temperature protected		
	electronics / motor		
	- Line undervoltage / phase failure		
	detection		
Touch current acc.	<= 3.5 mA		
IEC 60990 (measuring			
network Fig. 4, TN			
system)			
Electrical leads	Via terminal box		
Motor protection	Thermal overload protector (TOP) wired		
	internally		
Protection class	I (if protective earth is connected by		
	customer)		
Product conforming	EN 61800-5-1; CE		
to standard			
Approval	EAC; UL 1004-7 + 60730		
_	•		

For cyclic speed loads, note that the rotating parts of the device are designed for maximum one million load cycles. If you have specific questions, contact ebm-papst for support.

### 3.5 Mounting data

Secure the mounting screws against accidentally coming loose (e.g. by using self-locking screws).

Strength class for	8.8
mounting screws	

You can obtain additional mounting data from the product drawing if necessary.

### 3.6 Transport and storage conditions

⇒ Use the device in accordance with its protection type.

Max. permissible	+80 °C
ambient motor temp.	
(transp./ storage)	
Min. permissible	-40 °C
ambient motor temp.	
(transp./storage)	

### 3.7 Electromagnetic compatibility

EMC interference	Acc. to EN 61000-6-2 (industrial	
immunity	environment)	
EMC interference	Acc. to EN 61000-6-3 (household	
emission	environment)	

If several devices are switched in parallel on the mains side so that the line current of the arrangement is in the range of 16- 75 A, then this arrangement conforms to IEC 61000-3-12 provided that the short-circuit power  $S_{\rm SC}$  at the connection point of the customer system to the public power system is greater than or equal to 120 times the rated output of the arrangement. It is the responsibility of the installation engineer or operator/owner of the device to ensure, if necessary after consultation with the network operator, that this device is only connected to a connection point with a  $S_{\rm SC}$  value that is greater than or equal to 120 times the rated output of the arrangement.

### 4. CONNECTION AND START-UP

### 4.1 Connecting the mechanical system

### **CAUTION**

Cutting and crushing hazard when removing the fan from the packaging

- Carefully remove the fan from its packaging. Make sure to avoid any shock.
- → Wear safety shoes and cut-resistant safety gloves.

### **CAUTION**

### Heavy load when taking out the device

Bodily harm, e.g. back injuries, are possible.

- → Two people should remove the device out of its packaging together.
- Check the device for transport damage. Damaged devices must no longer be installed.
- Install the undamaged device according to your application.

### 4.2 Connecting the electrical system

### **DANGER**

### Electric voltage on the device

Electric shock

- → Always install a protective earth first.
- → Check the protective earth.

### **DANGER**

### Incorrect insulation

Risk of fatal injury from electric shock

- → Use only cables that meet the specified installation requirements for voltage, current, insulation material, load etc.
- → Route cables such that they cannot be touched by any rotating parts.

### DANGER

Electrical load (>50  $\mu$ C) between mains wire and protective earth connection after switching of the supply when switching multiple devices in parallel.

Electric shock, risk of injury

→ Make sure that sufficient protection against accidental contact is provided.

Before working on the electrical connection, the connections to the mains supply and PE must be shorted.

### CAUTION

### **Electrical voltage**

The fan is a built-in component and features no electrically isolating switch.

- → Only connect the fan to circuits that can be switched off with an all-pole separating switch.
- → When working on the fan, you must switch off the installation/machine in which the fan is installed and secure it from being switched on again.

### NOTE

### Interferences and failures are possible

Maintain a distance to the power supply line when routing the control lines of the device.

→ Ensure a sufficiently large clearance. Recommendation: clearance > 10 cm (separate cable routing)

### NOTE

### Water penetration into leads or wires

Water enters at the cable end on the customers side and can damage the device.

→ Make sure that the cable end is connected in a dry environment

Connect the device only to circuits that can be switched off using an all-pole disconnecting switch.

### 4.2.1 Prerequisites

- Check whether the data on the type plate agree with the connection data.
- Before connecting the device, ensure that the supply voltage matches the operating voltage of the device.
- Only use cables designed for current according to the type plate. For determining the cross-section, follow the basic principles in accordance with EN 61800-5-1. The protective earth must have a cross-section equal to or greater than the outer conductor cross-section.

We recommend the use of 105°C cables. Ensure that the minimum cable cross-section is at least AWG26/0.13 mm<sup>2</sup>.

### Earth wire contact resistance to EN 61800-5-1

Compliance with the impedance specifications to EN 61800-5-1 for the protective earth circuit must be verified in the end application.

Depending on the installation situation, it may be necessary to install an additional protective earthing conductor via the additional protective earth connection point available on the device.

The protective earth connection point is located on the housing and has a protective earth symbol and a bore hole.

### 4.2.2 Power supply connection, fuse protection

Assignment of conductor cross-sections and the fuse protection required for them (overload protection only, no device protection).

Nominal voltage	Safety fuse		Automatic circuit breaker	Wire cross- section	Wire cross- section
	VDE	UL	VDE	mm²	*AWG
3/PE AC 380 - 480 VAC	16 A	15 A	C16A	1.5	16
3/PE AC 380 - 480 VAC	20 A	20 A	C20A	2.5	14
3/PE AC 380 - 480 VAC	25 A	25 A	C25A	4.0	12
3/PE AC 380 - 480 VAC	32 A	30 A	C32A	6.0	10

<sup>\*</sup> AWG = American Wire Gauge

### 4.2.3 Idle current

Because of the EMC filter integrated for compliance with EMC limits (interference emission and interference immunity), idle currents in the mains cable can be measured even when the motor is at a standstill and the mains voltage is switched on.

- The values lie in a range of typical < 250 mA.
- The effective power in this operating state (readiness for operation) is simultaneously at typical < 5 W.</li>

### 4.2.4 Residual current operated device

Only universal (type B or B+) RCD protective devices are permitted. Like frequency inverters, RCD protective devices cannot provide personal safety while operating the device. When switching on the power supply of the device, pulsed charge currents from the capacitors in the integrated EMC filter can lead to the RCD protective devices triggering without delay. We recommend residual current devices with a trigger threshold of 300 mA and delayed triggering (super-resistant, characteristic K).

### 4.2.5 Leakage current

For asymmetrical power systems or if a phase fails, the leakage current can increase to a multiple of the nominal value.

### 4.2.6 Locked-rotor protection

Due to the locked-rotor protection, the start-up current (LRA) is equal to or less than the nominal current (FLA).

### 4.3 Connection in terminal box

### 4.3.1 Preparing connection lines for the connection

Strip the cable just enough so that the screwed cable gland is tight and the terminals are relieved of strain. Tightening torque, see chapter 3.1 Product drawing.

Fig. 1: Recommended stripping lengths in mm (inside the terminal box) Legend: CL = control lines

### 4.3.2 Connecting cables with terminals

### WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

- $\,\to\,$  Wait five minutes after disconnecting the voltage at all poles before opening the device.
- ⇒ Remove the cap from the screwed cable gland.

Remove the cap only in those places where cables are inserted.

- Mount the screwed cable glands with the seal inserts provided in the terminal box.
- Insert the line(s) (not included in the standard scope of delivery) into the terminal box.
- ⇒ First connect the "PE" (protective earth) connection.
- ⇒ Connect the lines to the corresponding terminals.

Use a screwdriver to do so.

During the connection work, ensure that no cables splice off.

Fig. 2: Connecting the wires to terminals

⇒ Seal the terminal box.

### 4.3.3 Cable routing

No water may penetrate along the cable in the direction of the cable gland. When routing the cable, ensure that the screwed cable glands are arranged at the bottom. The cables must always be routed downwards.

Fig. 3: Cable routing for fans installed upright.

### 4.4 Factory settings

Factory settings with which the device is pre-set by ebm-papst.

Cantual made	DM/M controlling
Control mode	PWM controlling
parameter set 1	
Control mode	PWM controlling
parameter set 2	
Fan / device adress	01
Max. PWM / %	100
Min. PWM / %	5
Save set value to	Yes
EEPROM	
Set value control	Analogue (linear)
Control function	Positive (heating)
parameter set 1	
Control function	Positive (heating)
parameter set 2

			input Ain2 U; SELV			
KL 3	14	Aout	Analogue output 0-10 VDC, max. 5 mA, output of the current motor level control coefficient / motor speed			
			parametrisable curve; SELV			

### 4.6 Checking the connections

- ⇒ Make sure that the power is off (all phases).
- ⇒ Secure it from being switched on again.
- ⇒ Check the correct fit of the connection lines.
- Screw the terminal box cover closed again. Terminal box tightening torque, see chapter 3.1 Product drawing.
- Route the connecting cables in the terminal box so that the terminal box cover closes without resistance.
- Use all plug screws (the entire number). In doing so, insert the screws manually to avoid damage to the thread.
- Make sure that the terminal box is correctly closed and sealed and that all screws and screwed cable glands are properly tightened.

### 4.7 Switch on device

The device may only be switched on if it has been installed properly and in accordance with its intended use, including the required safety mechanisms and professional electrical connection. This also applies for devices which have already been equipped with plugs and terminals or similar connectors by the customer.

### WARNING Hot motor housing

Fire hazard

- → Ensure that no combustible or flammable materials are located close to the fan.
- Inspect the device for visible external damage and the proper function of the protective features before switching it on.
- Check the air flow paths of the fan for foreign objects and remove any that are found.
- ⇒ Apply the nominal voltage to the voltage supply.
- ⇒ Start the device by changing the input signal.

### 4.8 Switching off the device

Switching off the device during operation:

- ⇒ Switch off the device via the control input.
- Do not switch the motor (e.g. in cyclic operation) on and off via power supply

Switching off the device for maintenance work:

- ⇒ Switch off the device via the control input.
- Do not switch the motor (e.g. in cyclic operation) on and off via power supply.
- ⇒ Disconnect the device from the supply voltage.
- When disconnecting, be sure to disconnect the earth wire connection last.

### 5. INTEGRATED PROTECTIVE FUNCTIONS

The integrated protective functions cause the motor to switch off automatically in case of faults described in the table.

Malfunctions	Description / Function of
	safety feature
Rotor position detection error	An automatic restart occurs.
Locked rotor	⇒ After the blockage is
	removed, the motor restarts
	automatically.
Line under-voltage (mains input	⇒ If the mains supply voltage
voltage outside of permitted	returns to permitted values, the
nominal voltage)	motor restarts automatically.
Phase failure	A phase of the supply voltage
	fails for at least 5 s.
	⇒ If all phases are correctly
	supplied again, the motor
	automatically restarts after 10 -
	40 s.

# 6. MAINTENANCE, MALFUNCTIONS, POSSIBLE CAUSES AND REMEDIES

Do not perform any repairs on your device. Return the device to ebmpapst for repair or replacement.

### WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

→ Wait five minutes after disconnecting the voltage at all poles before opening the device.

### CAUTION

If control voltage is applied or a speed setpoint is stored, the motor automatically restarts, e.g. after a power failure. Danger of injury

- → Keep out of the danger zone of the device.
- → When working on the device, switch off the mains supply voltage and secure the latter from being switched on again.
- → Wait until the device stops.
- → After working on the device, remove any used tools or other objects from the device.

If the device remains out of use for some time, e.g. when in storage, we recommend switching the device on for at least two hours to allow any condensate to evaporate and to move the bearings.

Malfunction/error	Possible cause	Possible remedy
Impeller running	Imbalance in rotating	Clean the device; if
roughly	parts	imbalance is still
		evident after
		cleaning, replace the
		device.
		If you have
		attached any weight
		clips during cleaning,
		make sure to

### 6.1 Cleaning

### NOTE

### Damage to the device during cleaning.

Malfunction possible

- → Do not clean the device using a water jet or high-pressure washer
- → Do not use any cleaners containing acids, bases or solvents.
- $\rightarrow$  Do not use any pointed or sharp-edged objects to clean.

### 6.2 Safety test

### NOTE

### High-voltage test

The integrated EMC filter contains Y capacitors. Therefore, the trigger current is exceeded when AC testing voltage is applied.

Test the device with DC voltage when you carry out the high-voltage test required by law. The voltage to be used corresponds to the peak value of the AC voltage required by the standard.
